

PHONO-1 MC | MM Preamplifier MkII

Quoted From | THE HI-FI+ AWARDS 2017

'Hi-Fi+ Editor Alan Sircom felt that "the PHONO-1 is one of the most naturally sounding phono stages I've heard in a long time," and even when used with a cartridge with an output of just 0.1mV "the only limitation it presented was the phono stage didn't go quite as loud as possible." This is clearly a top-notch phono stage in a small package, with a £999 price tag that utterly belies its actual performance. Think of the PHONO-1 as a truly high-end phono stage that forgot to get too expensive!'
